OMICRON B.1.1.259 LINEAGE

- Omicron (lineage B.1.1.529) is a new SARS-CoV-2 variant that was designated as a Variant of Concern by the WHO on November 26, 2021.
- Omicron was first identified in South Africa and Botswana with earliest specimen collection dates of November 9, 2021.
- Lockdowns in Europe.
- Cases double every 2 to 3 days
- First reported case of Omicron variant in United States identified in San Francisco on December 1, 2021. As of 12/13/21, 44 states have identified the variant. Most cases are mild.
- Pfizer, Moderna, J&J, and AstraZeneca vaccines have reduced effectiveness at preventing infection.

NEW CDPH GUIDANCE

New as of 12/13/21

- Universal masking mandate for all indoor public gatherings from 12/15/21 – 1/15/22
- Indoor Mega Events now require a PCR test with-in 48 hours of the event or an antigen test with-in 24 hours of the event
- The state recommends anyone who enters California get a covid test 3 to 5 days after arrival
- This is due to a 47% increase in cases since thanksgiving.
